Global EMC Inc. Moving to New, Larger Stouffville Facility

Stouffville, Ontario - Wednesday, August 10th, 2011

Global EMC Inc. is pleased to announce its expansion to a new 23,000 sq. ft. Stouffville location at Woodbine and Stouffville Side Road, in their continuing growth to support clients requiring compliance testing. Currently located in Richmond Hill in a 9,500 sq. ft. location, Global EMC will be expanding into its' own 23,000 sq. ft. building, housing both product safety and EMC testing operations supported by a significant investment in "state of the art" test equipment.

With completion of this new facility, Global EMC Inc. will offer more EMC services and larger capacity to meet our clients' needs including military testing, wireless (FCC & IC) and environmental testing such as vibration, Hi-Lo temperature and HALT/HASS.

Global EMC's President, Garry Lee noted "We are very excited to be expanding our facility. We moved into our Richmond Hill facility only five years ago and while our dreams were to continue our growth through strong customer support, we never dreamed of having to move into our own, larger facility so quickly. We are installing two new 3 meter semi-anechoic EMC chambers, 1 pre-compliance immunity chamber, as well as a 10 meter Open Area Test Site to further augment our testing services, this will be complemented with our new expanded Military testing."

About Global EMC Inc.

Global EMC Inc. was established in early 2000 to meet a growing consumer product safety market. By offering effective, timely, knowledgeable technical support to both the consumer products and medical device markets, Global EMC Labs has grown significantly. Product safety has been the Global EMC Labs specialty for several years, and growing EMC demands from electronics clientele created the opportunity for Global EMC to establish the full range of product testing and EMC certification / verification issues. Global EMC compliments the well-established product safety operations offering "one-stop" consulting services to meet client deadlines.
