

Flexible on planning..... their vast experience enhances our ability to meet required EMC standards. Timely in accommodating our requests and adjust their schedules to meet our tight time frames.

Dhruva Maharaj, Hardware Designer

We have worked with the Global EMC engineering team for several years and have a strong working relationship based upon their knowledgeable EMC industry experience and their understanding of our products. They are very flexible on planning, which greatly enhances our meeting the required standards to ensure rapid market entry for our ever-evolving products.

Often, we turn to them for a quick prescan confirmation that the product is compliant before locking down the final design for a production run. Their vast experience helps us to avoid noncompliant situations and their willingness to accommodate our needs on short notice is much appreciated.

From time to time, we turn to Global EMC Inc for more complex projects that may be outside their scope but they are creative at meeting our requirements and monitor third party testing as the project moves forwards. We find the Global EMC team to be very timely in communicating any updates and very proactive where issues are identified. They often recommend several options to address our requirements and still meet certification requirements.

Often, we face very tight timeframes for a new product launch and find their team very accommodating at modifying their production schedules to meet our very demanding requirements and the Global EMC team comes through every time.
